Ticket Barcode/RFID Printer

Desktop POS Terminals

MINIMUM SYSTEM REQUIREMENTS

Manual Cashier: Touch Screen POS with Ticket validator and a customer display.

Central Station: Desktop PC or laptop with i7 processor

Handheld Devices: Touch Screen terminals with keypad, barcode scanner and RFID reader (optional).

THE BASIC MODULE FEATURES

- Secured network communication between the various elements of the system: the server, the cashiers and the various reading points.
- Password protected screens, with full trace of all the transactions and manipulations during every shift.
- Complete log of the activity, with full details on the manual overrides and alerts.
- Flexible rates that can be tailored to meet any time or count criteria, with seasonal passes, membership discounts or vouchers.
- Seasonal Cards personalization with photos and signatures.
- Real Time monitoring of the number of tickets issued since the shift started.
- Barcode, QR Code, Magnetic, Mifare and EPC Gen2 RFID technologies.
- Large touch screen monitors at the peripheral devices to offer clear instructions and customized messages.
- Detailed reports on the daily transactions to be printed locally or exported to accounting systems.

ADDITIONAL MODULE

- Lockers Management using RFID or barcode technology with individual readers or central ones.
- Interface with parking management system where tickets issued at the parking can be paid at the ticketing stations.
- POF with multi-currency recycler are available to issue tickets when the cashiers are overloaded.
- E-Purse where money can be deposited on the tickets or seasonal passes so as to be used at outlets inside the premises.
- Management of additional services including tasks scheduling and courts reservation as well as a variety of discount vouchers and fidelity cards.
- Automatic gender and age profiling to assist in gathering data on the daily patrons.

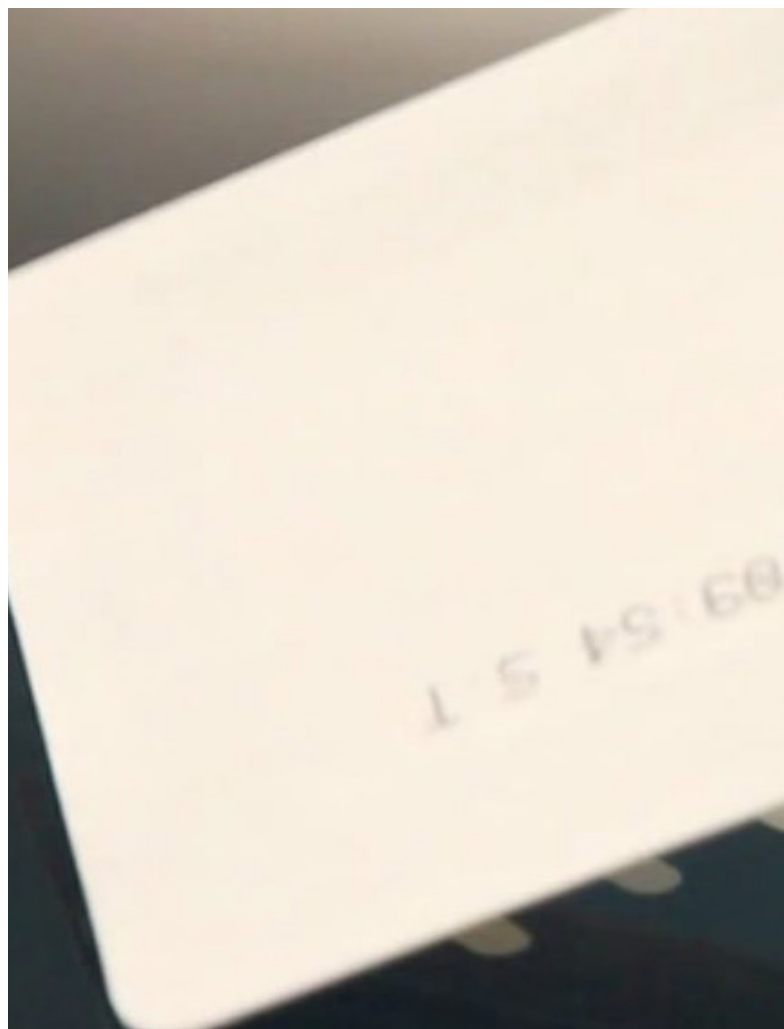

EXPAND THE POWER OF YOUR TICKETING SOLUTION WITH HANDHELD DEVICES

TicketPro essentially issues tickets that are verified visually at the entrances or better read electronically at turnstiles.

TicketPro can also communicate with handheld devices that can electronically the tickets to identify the holder inside the premises to make sure that holder of the ticket or seasonal pass is valid in a specific time zone or specific area especially when no turnstiles are installed at the main entrances or secondary entrances to restricted areas – common in ski resorts and amusement parks.

Sample Daily Report

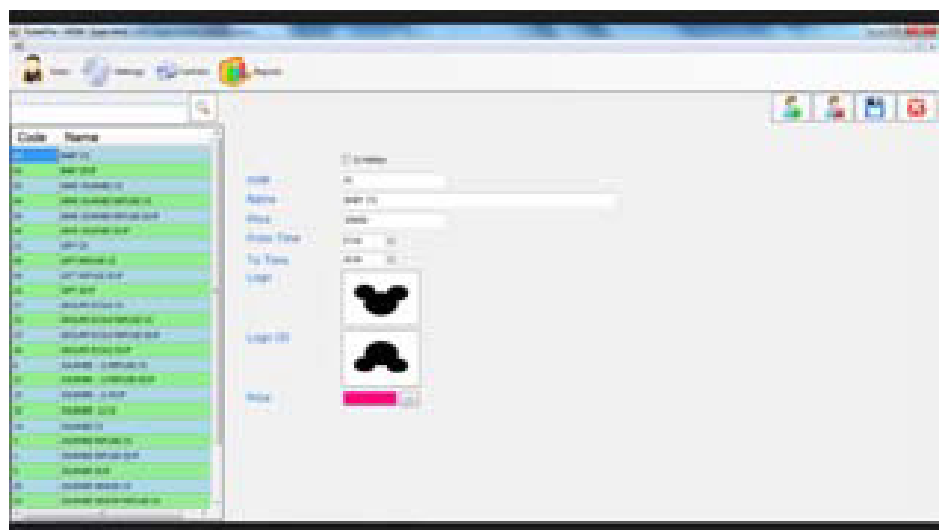

TICKETPRO IS A MODULAR AND POWERFUL TOOL THAT OFFERS THE BASIC FUNCTIONS

Ticketing systems are essential for Amusement parks, Ski resorts, Museums, Clubs etc. where a proper system should be able to manage the issuing of the tickets for the people wishing to enter their establishment the fastest and simplest way possible for them and their guests, as well as, offer the possibility to verify the validity of these tickets during the period of their validity at any time.

TicketPro 1.0 is a modular and powerful tool that offers the basic functions but also offers a flexibility in the choice of reading technology where it can issue various types of cardboard tickets or plastic cards personalized with simple barcodes, QR codes printers or magnetic stripes or even RFID encoders.

Moreover, **TicketPro 1.0** offers that the means to read the electronic information on the tickets and cards at various points inside the premises, such as:

- At the entrance, using readers mounted on top of turnstiles to authorize the access.
- At the various Points of Sales located at food courts or shopping outlets using desktop reader linked to POS terminals.
- Anywhere using handheld devices.
- At lockers and closets using electronic locks mounted on the locker leaves or at central control points.

TicketPro 1.0 is Windows based and can be installed on a single station or on multiple stations connected over a LAN to a central management server where parameters are set and reports are issued to help the management in assessing the sales and limiting any fraud.

A COST EFFICIENT SOLUTION THAT AUTOMATES ALL OF YOUR TICKETING OPERATION
